Exym Obtains Meaningful Use Certification/Adds e-Prescribing

WESTMINSTER, Calif. -- February 29, 2012 – Exym® was recently certified by the Office of the National Coordinator for Health Information Technology (ONC) as a Modular EHR. With their partnership with RxNT, they now offer a complete e-Rx solution that qualifies medical staff for Meaningful Use incentive money.

One of the advantages of web-based software is that it is possible to integrate functionality from other software by making two systems communicate with each other. Given Exym's long-standing expertise in electronic data interchange (EDI) it was easy to integrate e-prescribing functionality by creating automated, secure links to RxNT.

RxNT is both ONC Meaningful Use and SureScripts certified. When combined with Exym, it provides a seamless e-prescribing solution that pays for itself with a fraction of the meaningful use incentive money.

When a patient is entered into Exym, that data is automatically, and securely, transferred to your RxNT account. Once in RxNT, providers can check drug formularies, review drug allergies and send scripts electronically to pharmacies.

When e-prescribing is completed, the medication history is automatically transferred back to the electronic health record in Exym for reporting and archival purposes. It can even be displayed in med support progress notes.

“We’re really pleased to offer a cost-effective, seamless e-prescribing solution to our customers. Combined with our ONC certification, it’s a very compelling combination for medical providers,” says Matt DeBeer, President of Exym. “We continue to stay ahead of the curve in terms of technology. This integration is one more example of that.”

About Exym, Inc.

Exym, Inc. simplifies the process of billing, documenting and managing mental health services with intuitive and easy-to-use web-based software. Our Activity Tracking System is a highly customizable and flexible clinical management solution designed to improve quality, streamline administrative tasks and help staff provide better care.

This EHR Module is 201X compliant and has been certified by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.
